

C³ - A macromolecular crystallisation resource for Australia

J. Newman, P. Pilling, T. Pham, N. McKern, M. Lawrence

CMHT, CSIRO, Parkville, VIC, Australia

The Collaborative Crystallisation Centre (C³) is a joint venture between five Institutes in Melbourne (BI, CSIRO, SVI, VCP, WEHI) which was put together in order to provide advanced crystallisation services to members of these Institutes and others in Australia.

The centre offers microfluidic crystallisation screening, nano-crystallisation screening, optimisation services, light scattering and crystal dehydration. Along with providing these services, the centre is dedicated to the development of novel or improved crystallisation technologies.
